

### Physical Quantities and Vectors Revision Questions

- a) Convert 52 miles per hour to meters per second. Given that 1 mile = 1609 m.
- b) The forces shown in Figure 1 are in equilibrium. Find the resultant force and its direction.

Figure 1

- c) Given vector  $F_1$  and  $F_2$  are in the x-y plane.  $F_1$  is 60 N at  $48^\circ$  and  $F_2$  is 90 N at  $110^\circ$  counterclockwise. Find the magnitude and direction of the resultant vector. Ans: 129.5 N,  $85.9^\circ$  Q1.
- d) Two forces of magnitudes 3.0 N and 4.0 N act on an object. Determine how the directions (same directions, opposite direction or perpendicular direction) of the two forces related if
- the net force has magnitude 7.0 N,
  - the net force has magnitude 5.0 N.
  - Determine the relationship between the directions gives the smallest magnitude of net force and calculate the magnitude.
- e) Convert  $1.0 \text{ kg/m}^3$  to unit of  $\mu\text{g/cm}^3$ .
- f) Change the following value  $5 \mu\text{m}^3/\text{hour}$  to unit  $\text{m}^3/\text{s}$ .
- g) The area of a land is  $500 \text{ km}^2$ . Express this area in  $\text{mi}^2$ . Given  $1 \text{ mi} = 1.6 \text{ km}$ .
- h) Figure B below shows the forces exerting on an object.

Figure B

- i) Find the  $x$ -component and  $y$ -component for vector **A**.
  - ii) Find the  $x$ -component and  $y$ -component for vector **B**.
  - iii) Calculate the net value for the  $x$ -components.
  - iv) Calculate the net value for the  $y$ -components.
  - v) Calculate the magnitude of the resultant vector.
  - vi) Determine the direction of the resultant vector.
- i) A certain fuel-efficient hybrid car has gasoline mileage of 65 mpg (miles per gallon). Given 1 gallon = 3.788 liters, 1 miles = 1.609 km.
- (i) If you are driving this car in Europe and want to compare its mileage with that of other European cars, express this mileage in km/L (L = liter).
  - (ii) If this car's gas tank holds 40 L, calculate the number of tanks of gas you will use to drive 1800 km.
- j) Find the net force acting on the system shown in Figure 2. Given forces  $F_1$ ,  $F_2$ ,  $F_3$  and  $F_4$  are 5 N each.

Figure 2

- k) Determine the magnitude and direction of the resultant force by adding the rectangular components of the three forces in Figure below.

l) Convert the following to SI units:

- (i) 76.5 cm / ms
- (ii) 150 ng / mm<sup>3</sup>

m) Figure below shows vectors **A**, **B**, **C** and **D** with their respective directions.

- (i) Determine the  $x$  and  $y$  components for each vectors.
- (ii) Find the magnitude and direction of the resultant vector.

n) Consider the vectors **A**, **B** and **C** shown in **Figure 5** below.

**Figure 5**

- i) Find the  $x$ -component and  $y$ -component for vector **A**.
  - ii) Find the  $x$ -component and  $y$ -component for vector **B**.
  - iii) Find the  $x$ -component and  $y$ -component for vector **C**.
  - iv) Calculate the net value for the  $x$ -components.
  - v) Calculate the net value for the  $y$ -components.
  - vi) Calculate the magnitude of the resultant vector.
  - vii) Determine the direction of the resultant vector.
- o) What is the resultant force on the box in **Figure 1** below?

**Figure 1**

- p) Convert  $150 \text{ g/cm}^3$  to  $\text{kg/m}^3$ .
- q) Mr. Bean is considering buying a European car and wants to see if its advertised fuel efficiency (expressed in  $\text{km/L}$ ) is better than that of his present car. If his car gets 37.3 miles per gallon, how many  $\text{km/L}$  is this? Given 1 gallon = 3.788 liters, 1 miles = 1.609 km.
- r) Position as a function of time equation is given as:  

$$x(t) = 2.5t^3 - 6.1t^2 - 3t + 9$$
Determine the instantaneous acceleration of the motion at  $t = 1.5 \text{ s}$ .

Answers:

- a) 23.24 m/s
- b) 4.75 N,  $64^\circ$  Q4
- c) 129.5 N,  $85.9^\circ$  Q1.
- d) i) Same directions    ii) Perpendicular directions    iii) Opposite directions, 1 N
- e)  $1000 \mu\text{g/cm}^3$
- f)  $1.39 \times 10^{-21} \text{ m}^3/\text{s}$
- g) 195.3 mi<sup>2</sup>
- h) i) +17.53 N, +35.95 N    ii) +51.96 N, -30 N    iii) 147.53 N  
iv) 21.96 N    v) 149.16 N    vi)  $8.47^\circ$  at the Q1
- i) i) 27.61 km/L    ii) 2 tanks
- j) 3.37 N,  $87.11^\circ$  at Q2
- k) 24.03 N,  $66.1^\circ$  at Q4
- l) i) 765 m/s    ii)  $0.15 \text{ kg/m}^3$
- m) i)  $A_x = 0$     ii) 12.83 m,  $27.58^\circ$  at Q2  
 $A_y = -8\text{m}$   
 $B_x = 7.5\text{m}$   
 $B_y = 12.99\text{m}$   
 $C_x = -10.88\text{m}$   
 $C_y = -5.07\text{m}$   
 $D_x = -7.99\text{m}$   
 $D_y = 6.02\text{m}$
- n) i)  $A_x = 7.22 \text{ m}$ ,  $A_y = 9.58 \text{ m}$   
ii)  $B_x = 11.49\text{m}$ ,  $B_y = -9.64\text{m}$   
iii)  $C_x = -3\text{m}$ ,  $C_y = -5.2\text{m}$   
iv) 15.71m  
v) -5.26m  
vi) 16.57m  
vii)  $18.51^\circ$  at Q2
- o) 1N to the left
- p)  $1.5 \times 10^5 \text{ kg/m}^3$
- q) 15.8 km/L
- r)  $10.3 \text{ m/s}^2$
